

Future Scope

The “Calculating Family Expenses Using ServiceNow” project has strong potential for expansion and improvement. The following are key areas where the solution can grow:

1. Integration with Banking APIs

- Automate expense entry by syncing with bank accounts or digital wallets.
 - Real-time import of transactions to minimize manual entry.
-

2. Mobile App Interface

- Develop a native or hybrid mobile app for quick expense logging and dashboard access.
 - Enable offline data entry with sync when online.
-

3. AI-Powered Insights

- Use AI/ML models to predict future spending trends.
 - Provide suggestions to reduce unnecessary expenses or optimize budgets.
-

4. Voice Assistant Integration

- Add support for Alexa, Siri, or Google Assistant for voice-activated expense logging.
-

5. Multi-Family or Group Support

- Expand functionality to allow shared dashboards for large joint families or roommate households.
 - Add admin-level budgeting for sub-groups.
-

6. Gamification of Savings

- Introduce point systems or visual achievements for staying under budget.

- Encourage saving through interactive progress tracking.
-

7. Data Export & Cloud Sync

- Export reports to formats like Excel, PDF, or Google Sheets.
 - Sync with cloud storage for data backup and portability.
-

8. Advanced Security Features

- Enable multi-factor authentication and activity logging.
 - Support for audit trails and compliance tracking.
-

9. ServiceNow Marketplace Publishing

- Convert the solution into a reusable Scoped App that can be shared or sold in the ServiceNow Store.
